

Mobile App Types			
① Access by installing Subject: costly to develop. Native	Access by app store Separate codebase for each platform. Hybrid	Access by URL One code base, multiple platforms. Mobile Web	Separate builds are generated from single code base. Access by URL 1 codebase, 1 URL
Fast	Hybrid	Mobile Web	Mobile Web
① Performance ↑	Possible		Unlimited (or No)
② Camera, Integ'n, calendar, contacts	Can Access device native features eg. Camera, GPS, contacts.		
③ Languages: Objective C → iOS Java → Android			HTML5, CSS, Javascript
④ development updates/new version	④ updates by installing new version	faster	fastest
⑤ Security High	High	High	weaker

- Native:
- install through App Store
 - can use device native fns. Camera, contacts, GPS etc.
 - costly to develop.
 - updates are not easy
 - for specific platform
- Web App:
- accessed through URL
 - can not use few device features
 - less costly to develop.
 - for multiple platform
- Can not buy all devices
used to save cost
emulator & sim are not the true represⁿ of devices.

- Website → Web App
- Desktop App 4", 5", 7", 9", 10"
- multiple screen sizes & OS combinⁿ
 - landscape & portrait orientⁿ: Orientⁿ Tg
 - N/W Tg: 2G, 3G, 4G, WiFi
But in desktop only broadband or dial-up connection
 - Interruptⁿ Tg: calls/SMS/push notificⁿ (Alarm, Reminder)
lock/unlock, USB insert/Remove
 - Security & Privacy Concern
many apps access device phonebook, pictures, videos, these are user personal data
Any defect around the misuse of data
→ unintentional access
 - Mobile app has feature of accessing camera & phonebook of device.
- system Back key scenario: calling page
click to call feature for phone no.
Add to phone contactⁿ
GPS/Direction features

TATA CONSULTANCY SERVICES

Android App vs iOS App

- Toast Notification feature in android only → Build install process
- Camera disable for a party app in iOS phone
- .ipa/.apk

less secure → Android vs iOS → more secure

- ① open source SW developed by Google
- ② Android can be modified by developer
- ③ Android support diff types of phones
- ④ android apps can be downloaded from Google Play store or from websites
- ⑤ Android has more testing challenges than iOS
- ⑥ iOS is designed to run only on Apple hardware (iphones)
- ⑦ Restricted Access: apps can be downloaded only from Apple's app store.

Testing that can be performed on Mobile are:-

- 1) Usability Tg
- 2) Compatibility Tg (across different devices, browsers, OS, Screen size)
- 3) Install/Uninstall Tg
- 4) Functionality Tg
- 5) Performance Tg (Load/stress Tg)
- 6) Security Tg
- 7) Memory Leakage
- 8) Interruption Testing
- 9) N/W based Tg (2G/3G/4G/WiFi)
- 10) Orientation Tg

Responsive Website → codebase is same for mobile & desktop

→ app adjust/fit its content as per the screen size of system/device.

Mobile Web → separate code base specific to mobile.

Non-responsive Website → separate code base specific to desktop.

~~Mobile web~~

Experience certainty. IT Services Business Solutions Consulting

For mobile pt. of view all UI related test cases should be checked in all diff screen size devices

Total TC = UI related TCs * 3

Highly Recommended

Subject Usability Testing: helps to improve end user satisfaction

Saves a product from failure

Date

Best way to understand how real users experience your app:

How easy to use
How easy to learn

Effectiveness

→ Easy to use & learn

→ Is content, color, icons, images used are pleasing

S/W

Failure reasons:

→ where to click next?

→ which page to go?

→ which icon represents what?

✓ → Error msg are not consistent or effectively displayed

✓ → Session time not sufficient

Efficiency:

→ Navigations: eg dropdown menu

✓ → Scroll bar should not be used frequently

→ Uniformity in the format of screen/webpage

✓ → Provision to search within your app

5 people uncover 80% can

experts
Non-exp

Usability Problems

Accuracy

→ No outdated data

→ No broken links rates etc

Best Practices: Usability Tg.

Start testing during early stage of design & devt

you can conduct V.Tg on your competitors product before you begin devt

This will help you determine usability standards for your Target Audience customer

→ It is costly, need lot of expert resources

Errors: → How many errors user can make
→ How much time app is taking to perform a task

Adv

Higher customer satisfaction & Retention
Repeat Business

TATA CONSULTANCY SERVICES

Globalizⁿ vs Localizⁿ Tg:

G.Tg is done to ensure that appⁿ can function in any culture or locale (language, territory & codePage) checks proper functionality of the product.

L.Tg process of checking the localized version of product for that particular culture or locale settings. The area affected by L.Tg are UI & Content.

Load vs Stress Tg:-

If you are testing normal expected load, this is load testing. (You know system will be used by up to 100 users at a time)

But when you want to determine, how the system behaves under extreme load & when it breaks, this is stress testing.

Why RTM: ReqID vs TestCases ^{Business Rules, Error Messages}

→ To ensure all the requirements are covered in our TC.

→ in case of any change in Req^t we can trace the impacted testcases

Deliverables:

1. Test Plan
2. Test Cases
3. RTM, Test Data
4. Status Report (Daily/weekly)
5. SIT Exit Report

Subject Challenges Faced

Team Handling: Endless, New Team members
KT, explain the long process
you work.

Roles & Responsibilities

As a SPOC/Module Lead for Project → offshore co-ordinator

Assign Task
Review Task
Attend variance call
Send Status Daily
Weekly
Reg. team's progress

1 → assigning task to team members
2 → Monitoring & Reviewing their work done by tomorrow

→ If they are in design phase

what Test Case/Test scenario they are writing

what test data they are prepared, suggesting what could be other possible scenarios

→ If in execution phase, All the team members assign variances to me then I review those & assign whether all the details are proper or not then assign to Onsite co-ordinator

3 → Attending variance call with onsite co-ordⁿ, Dev, BA & other stakeholders (Env Team, Test Data Team, Backend Team)

Onsite co-ordinator explains each defect one by one & if further clarifⁿ required I used to explain. Also used to take status of some blocker defects from Dev

After I assigned defect to O.C.

→ Onsite co-ord used to assign it to appropriate team

4 → Sending Daily/Weekly status Report

Dev Team
Env Team
Backend Team

5 → Management of changes in requirement.

→ Analyze impact & ask team m^{ts} to update TCs accordingly.

Being a Lead

ensure all the deliverables are delivered on time

To be aware of other projects running in || to your project for device planning.

Ensure all team members are given KT of app & are well aware of process. Any related issues/dependency

Motivate the team member by appreciating them, encouraging them learn new skills.

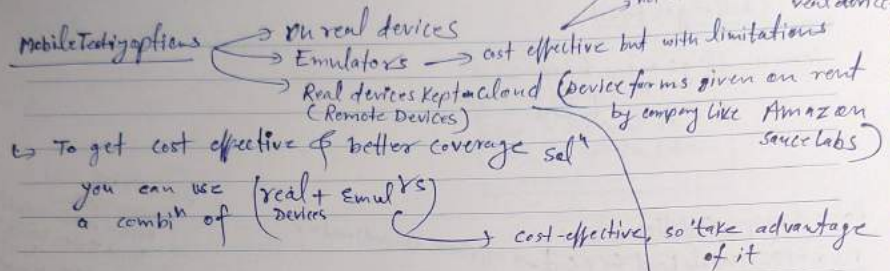

Create an emotion/friendly bond with them.
